

Project Crown Promenade

www.luxview.com.sg

Overview

Location: Melbourne
Architect: Batesmart
Product: Roller Blinds
System: Manual
Qty: 578

“The premium 5 star Crown Promenade which offers numerous luxurious benefits is enhanced by newly fitted roller blinds across all floors and rooms throughout the building, keeping light out during the day and creating an intimate and private ambience at night.”

Objective

To showcase the established Crown Promenade building and the beautiful Melbourne Skyline and what the city has to offer for its visitors. The solution needed to highlight the contemporary architectural design and its interiors in a subtle elegant manner.

The Solution

Roller blinds were used for this project given that the urban structure had different window sizes and scales for each room. It was a perfect fit to highlight the city skyline and drape over the interior for privacy and special events. A Manual system was used for full control and easy use by guests and staff throughout the whole building. The fabric Euroview Transparent Rice gave rooms an elegant and luxury atmosphere whilst privacy is ensured.

A total of 578 manual roller blinds were fitted across all the floors throughout the building for consistency and aesthetically pleasing appearance. A landmark destination for visitors in Melbourne and at the forefront of one of the leading luxury hotels in Australia, only the best solution was delivered for this project.
